

## ISO Standards Handbook:

# Acoustics

Volume 1: General aspects of acoustics; methods of noise measurement in general; noise with respect to human beings

1995, Ed. 2, 616 p., ISBN 92-67-10221-4

## Contents

### General aspects of acoustics

<b>ISO 16:1975</b>	Acoustics – Standard tuning frequency (Standard musical pitch)
<b>ISO 31-7:1992</b>	Quantities and units – Part 7: Acoustics
<b>ISO 131:1979</b>	Acoustics – Expression of physical and subjective magnitudes of sound or noise in air
<b>ISO 266:1975</b>	Acoustics – Preferred frequencies for measurements
<b>ISO 1683:1983</b>	Acoustics – Preferred reference quantities for acoustic levels
<b>ISO 2204:1979</b>	Acoustics – Guide to International Standards on the measurement of airborne acoustical noise and evaluation of its effects on human beings
<b>ISO 4871:1984</b>	Acoustics – Noise labelling of machinery and equipment
<b>ISO 7731:1986</b>	Danger signals for work places – Auditory danger signals
<b>ISO 8201:1987</b>	Acoustics – Audible emergency evacuation signal
<b>ISO/TR 11688-1:1995</b>	Acoustics – Recommended practice for the design of low-noise machinery and equipment – Part 1: Planning

### Methods of noise measurement in general

<b>ISO 1996-1:1982</b>	Acoustics – Description and measurement of environmental noise – Part 1: Basic quantities and procedures
<b>ISO 1996-2:1987</b>	Acoustics – Description and measurement of environmental noise – Part 2: Acquisition of data pertinent to land use
<b>ISO 1996-3:1987</b>	Acoustics – Description and measurement of environmental noise – Part 3: Application to noise limits
<b>ISO 3740:1980</b>	Acoustics – Determination of sound power levels of noise sources – Guidelines for the use of basic standards and for the preparation of noise test codes
<b>ISO 3741:1988</b>	Acoustics – Determination of sound power levels of noise sources – Precision methods for broad-band sources in reverberation rooms

<b>ISO 3742:1988</b>	Acoustics – Determination of sound power levels of noise sources – Precision methods for discrete-frequency and narrow-band sources in reverberation rooms
<b>ISO 3743-1:1994</b>	Acoustics – Determination of sound power levels of noise sources – Engineering methods for small, movable sources in reverberant fields – Part 1: Comparison method for hard-walled test rooms
<b>ISO 3743-2:1994</b>	Acoustics – Determination of sound power levels of noise sources using sound pressure – Engineering methods for small, movable sources in reverberant fields – Part 2: Methods for special reverberation test rooms
<b>ISO 3744:1994</b>	Acoustics – Determination of sound power levels of noise sources using sound pressure – Engineering method in an essentially free field over a reflecting plane
<b>ISO 3745:1977</b>	Acoustics – Determination of sound power levels of noise sources – Precision methods for anechoic and semi-anechoic rooms
<b>ISO 3746:1995</b>	Acoustics – Determination of sound power levels of noise sources using sound pressure – Survey method using an enveloping measurement surface over a reflecting plane
<b>ISO 3747:1987</b>	Acoustics – Determination of sound power levels of noise sources – Survey method using a reference sound source
<b>ISO 6081:1986</b>	Acoustics – Noise emitted by machinery and equipment – Guidelines for the preparation of test codes of engineering grade requiring noise measurements at the operator's or bystander's position
<b>ISO 6926:1990</b>	Acoustics – Determination of sound power levels of noise sources – Requirements for the performance and calibration of reference sound sources
<b>ISO 7574-1:1985</b>	Acoustics – Statistical methods for determining and verifying stated noise emission values of machinery and equipment – Part 1: General considerations and definitions
<b>ISO 7574-2:1985</b>	Acoustics – Statistical methods for determining and verifying stated noise emission values of machinery and equipment – Part 2: Methods for stated values for individual machines
<b>ISO 7574-3:1985</b>	Acoustics – Statistical methods for determining and verifying stated noise emission values of machinery and equipment – Part 3: Simple (transition) method for stated values for batches of machines
<b>ISO 7574-4:1985</b>	Acoustics – Statistical methods for determining and verifying stated noise emission values of machinery and equipment – Part 4: Methods for stated values for batches of machines
<b>ISO/TR 7849:1987</b>	Acoustics – Estimation of airborne noise emitted by machinery using vibration measurement
<b>ISO 8297:1994</b>	Acoustics – Determination of sound power levels of multisource industrial plants for evaluation of sound pressure levels in the environment – Engineering method
<b>ISO 9613-1:1993</b>	Acoustics – Attenuation of sound during propagation outdoors – Part 1: Calculation of the absorption of sound by the atmosphere

**ISO 9614-1:1993** Acoustics – Determination of sound power levels of noise sources using sound intensity – Part 1: Measurement at discrete points

## **Noise with respect to human beings**

**ISO 226:1987** Acoustics – Normal equal-loudness level contours

**ISO 389:1991** Acoustics – Standard reference zero for the calibration of pure-tone air conduction audiometers

**ISO 389-2:1994** Acoustics – Reference zero for the calibration of audiometric equipment – Part 2: Reference equivalent threshold sound pressure levels for pure tones and insert earphones

**ISO 389-3:1994** <sup>1)</sup> Acoustics – Reference zero for the calibration of audiometric equipment – Part 3: Reference equivalent threshold force levels for pure tones and bone vibrators

**ISO 389-4:1994** Acoustics – Reference zero for the calibration of audiometric equipment – Part 4: Reference levels for narrow-band masking noise

**ISO 532:1975** Acoustics – Method for calculating loudness level

**ISO 1999:1990** Acoustics – Determination of occupational noise exposure and estimation of noise-induced hearing impairment

**ISO/TR 3352:1974** Acoustics – Assessment of noise with respect to its effect on the intelligibility of speech

**ISO 4869-1:1990** Acoustics – Hearing protectors – Part 1: Subjective method for the measurement of sound attenuation

**ISO 4869-2:1994** Acoustics – Hearing protectors – Part 2: Estimation of effective A-weighted sound pressure levels when hearing protectors are worn

**ISO/TR 4869-3:1989** Acoustics – Hearing protectors – Part 3: Simplified method for the measurement of insertion loss of ear-muff type protectors for quality inspection purposes

**ISO/TR 4870:1991** Acoustics – The construction and calibration of speech intelligibility tests

**ISO 6189:1983** Acoustics – Pure tone air conduction threshold audiometry for hearing conservation purposes

**ISO 7029:1984** Acoustics – Threshold of hearing by air conduction as a function of age and sex for otologically normal persons

**ISO 7196:1995** Acoustics – Frequency-weighting characteristic for infrasound measurements

**ISO 8253-1:1989** Acoustics – Audiometric test methods – Part 1: Basic pure tone air and bone conduction threshold audiometry

**ISO 8253-2:1992** Acoustics – Audiometric test methods – Part 2: Sound field audiometry with pure tone and narrow-band test signals

---

1) Incorporates the changes made by Technical Corrigendum 1:1995 to ISO 389-3:1994
